The NASA Steckler Space Grant Prototype Mars- Lunar Greenhouse program

- **15 years research at University Arizona, UA-CEAC**
- **collaboration with Sadler Machine Co**
beginning with the South Pole Food Growth Chamber through Raytheon Polar Services Company and National Science Foundation (NSF),
- **with continued sponsorship by NASA, various aerospace companies including Italy's Aero-Sekur and Franco-Italian, Thales Alenia Space**

Aero Sekur is a specialist supplier of safety systems and advanced flexible materials to the global aerospace and defense markets. The company has extensive manufacturing and R&D facilities in Italy and representation worldwide. The core competency of the business is the design and development of advanced engineered structures using flexible materials.

Why are we here today? (other than the obvious!)

Food for Life

Quality of Life (QOL)!

***One cannot
Think well,
Love well,
Sleep well,
if one has not
Eaten well.***

**UNO NON PUÓ
PENSARE BENE,
AMARE BENE,
DORMIRE BENE,
SE NON HA
MANGIATO BENE.**

S. Philadelphia, Pennsylvania, USA

*~ How do you feed a family on the moon?
or Mars?*

WE KNOW HOW

Lunar Greenhouse Prototype

2.1 m

5.5 m

21 m³ LGH + 2 m³ HVAC

3.5 VAC/day = 0.15 VAC/h

Phase 1 & 2 Objectives Completed & Delivered

RALPH STECKLER/NASA SPACE GRANT SPACE COLONIZATION AND TECHNOLOGY DEVELOPMENT
PHASES 1 AND 2: LUNAR GREENHOUSE PROTOTYPE FOR BIOREGENERATIVE LIFE SUPPORT SYSTEMS

Fundamentals:

- **Food production capability** (kg per area per time);
- **Water balance** (liquid irrigation water, biomass and water vapor);
- **Carbon balance** (gaseous carbon dioxide and biomass);
- **Energy balance** (electrical/heat/light/food calories);
- **Fertilizer consumption analysis** (kg per area per time);
- **Environmental Control Analysis** (spatial/temporal climate uniformity);
- **System operational requirements, capabilities and weaknesses, with crops (lettuce, tomatoes, sweet potato, and strawberry).**

Phase 1 & 2 Objectives Completed & Delivered

RALPH STECKLER/NASA SPACE GRANT SPACE COLONIZATION AND TECHNOLOGY DEVELOPMENT
PHASES 1 AND 2: LUNAR GREENHOUSE PROTOTYPE FOR BIOREGENERATIVE LIFE SUPPORT SYSTEMS

Enhancements:

- Expand from one to four LGH Units
- Enhance Monitoring/Controls of Initial LGH
- Develop Model for Simulation and Control (MEC)
- Enhance Cable Culture Plant Growth
- Begin Compost Wick Evaporator Resource Recovery (limited results)
- Solar Energy Plant Lighting & Power System
- Remote Experts Network Decision Support System and
Enhanced Telepresence
- Promote STEM Education Access & Outreach

Phase 1 LGH Life Support Production Results

Oxygen (kg)
Biomass (kg)
Water (kg)

C4 = 58 Day Closure Interval

Change in growth after 58 days

Remote Experts Network Decision Support System (RENDSys)

(David Story and Murat Kacira, Agric. & Biosystems Engineering)

System Overview

Data Notes
The collected data represents the aerial and root-zone environment that lettuce plants were growing in.

Data Information
First Entry: 10/28/2012 7:25:00 PM
Last Entry: 3/30/2013 10:00:00 AM
Entry Interval: 10 (min)

Management and Remote Control of Mars-Lunar Greenhouse from the South Pole Station, Antarctica

January – November 2013

Amundsen-Scott Station,
South Pole, Antarctica

Mars-Lunar GH Lab,
Univ Arizona, USA

Himawari focusing and tracking solar collector
(located adjacent to UA-CEAC Extreme Climate Lab)

Fresnel Lens, Fiber Optic Bundle, Capture PAR for plant growth, Infrared for heat, and UV for PV electric power, separately.

MAE Progetti di grande rilevanza ITALIA -USA 2013
IBAF -CNR, Aero Sekur, Thales Alenia Space Italia, University of Arizona
Organized by Alberto Battistilli

Consiglio Nazionale delle Ricerche

**Alberto and
student at
Mars-Lunar
Greenhouse
Lab**

CNR is working on the plant-environment interaction to produce good, highly nutritional and safe food for astronauts in space and for farmers on Earth to contribute to consumers wellness

Student Education and Outreach to World

Chris Pagliarulo, AZ Space Grant Fellow (far upper left), and Lane Patterson, Graduate Student (far right) with visiting Sunnyside High School students.
Webcam, LGH Lab, UA-CEAC

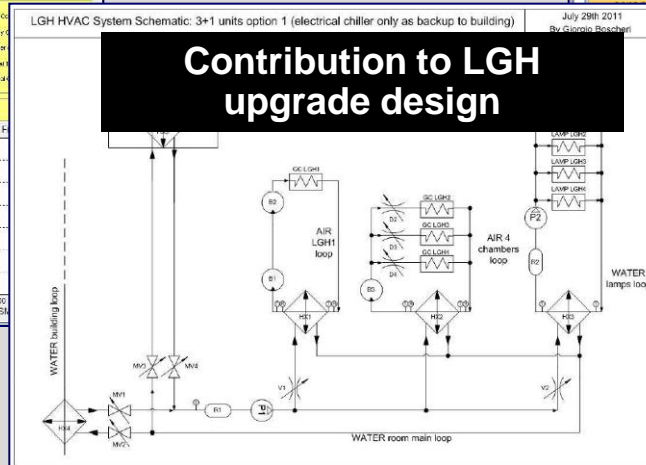

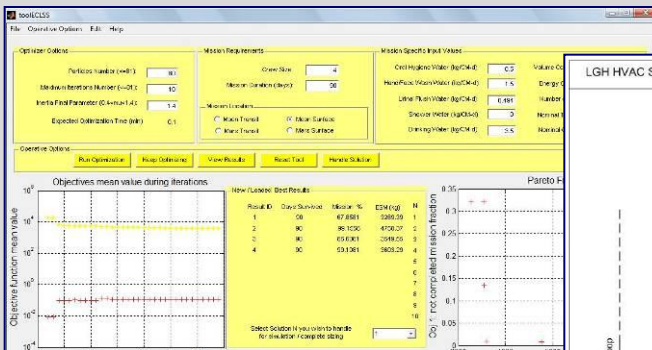

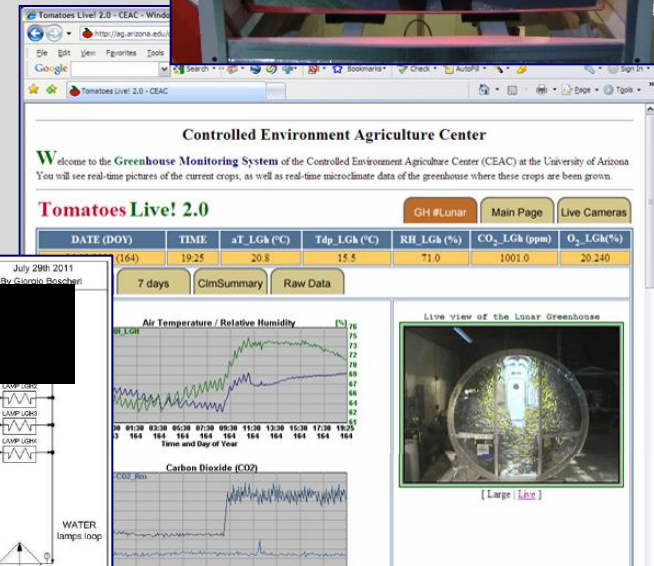

Actual “live” view from web camera located within LGH Lab

TAS-I Contribution to Steckler II

Collaborative Effort Activity List:

- Introduce space-oriented insight into LGH design
- LGH metric evaluations (ESM)
- Study on liquid streams (e.g. condensate, etc.)
- Exploitation of Phase 1 Modified MEC predictive model
- Tests in EDEN plant growth chamber
- Demonstration of tele-presence features

Upgraded EDEN for Tests

Contribution to LGH upgrade design

Modified MEC Model to be applied to phase II results

TELEPRESENCE demonstration

Modified Energy Cascade (MEC) Model adapted for a Multicrop Mars-Lunar Greenhouse Prototype

*Boscheri, Kacira, Patterson et. al. with collaboration from TAS-I & Arizona

Objective

Develop (and validate) an energy cascade model for a multi-crop Mars-lunar greenhouse system, validate its performance, and identify the sensitivity of the model outputs to the input parameters.

Model Predicted Values

Biomass produced

Net O₂ produced

Water condensate produced

Water consumed

Net CO₂ consumed

Fertilizer consumed

Since 2004: INTERNATIONAL AGROSPACE WORKSHOP

Developed by Aero Sekur and Supported by Lazio Region
