

The ideal partner for

Energy Transition

Track the energy usage of each single device with the litbox and litapp in real time, delivering insights in kWh, CO₂ emissions, and cost.

- **Automation and control** of smart devices
- **Rewards and engage** the best users through gamification
- **Compare your energy tariff** to always have the lowest price
- **Reports anomalies** in real time

We are specialized in

Energy disaggregation

Become our
Distributor

The ideal partner for

Energy Transition

lit provides a plug&play hardware solution that empowers both residential and commercial users to monitor and optimize their energy consumption through advanced energy disaggregation technology.

litbox is easy to install, quick, and non-invasive.

Sector use case:

Utility

Deliver real-time insights to reduce consumer churn and boost loyalty with personalized energy efficiency solutions.

Real estate

Add value to properties with smart energy solutions that meet the demands of future-oriented tenants and investors.

Energy communities

Enable smart energy sharing and real-time data on production and consumption for collective sustainability.

Architecture firms

Integrate non-intrusive energy monitoring to enhance building value and support green certifications.

Luxury

Combine invisible tech and intelligent data to elevate comfort while embracing sustainability in premium spaces.

Using **NILM** (Non-Intrusive Load Monitoring) technology based on **Machine Learning**, lit disaggregates energy consumption and allows you to monitor each device individually in a simple and efficient way, **reducing energy waste and CO₂ emissions**.
